

JS-15050 Private Integrated Services Network (Advice of Charge supplementary services) - Specifications for inter-PBX signalling protocol -

<Remarks>

1. Relations with international standards

This standard conforms to the second edition of the international standard ISO/IEC 15050(2003) with regard to the advice of charge supplementary services in private integrated services digital network issued by ISO/IEC JTC1.

2. Summary of differences from international standards

There are amendments made because of the editorial errors which exist in the original international standard, and are indicated by "notes" where required.

In addition, the term "CCITT" included in the original document is replaced by "ITU-T".

Note that descriptions in the section shown below are not included in this standard, although those are not deleted in order to help users' understanding and are marked with "#" for identification.

6.9.13 Interaction with Call Interception (ANF-CINT)

6.9.13.1 Actions at an ANF-CINT Intercepting PINX

6.9.15 Interaction with Wireless Terminal Mobility Incoming Call (ANF-WTMI)

6.9.15.1 Actions at an ANF-WTMI Rerouting PINX

The reason of deletion is because the corresponding supplementary service is not standardized as a TTC standard yet, so at the time when the standard is established, revision of this standard will be considered.

3. History of revisions

Version	Date of issue	Contents of revision
1	November 26th 1998	Initial issue
2	April 20th 2004	Amendments corresponding to the relating international standard

4. Others
