

JT-G810 Definitions and Terminology for Synchronization Networks

1. Relations with International Standards

This Standard basically conforms to ITU-T Recommendation G.810 (1996). In this Standard, items for synchronization networks in Japan are extracted from the recommendation.

2. Summary of Departures from ITU-T Recommendations

2.1 Optional Items

None

2.2 National Issues

None

2.3 Others

In this Standard, the following items are deleted from the above Recommendation:

- (a) Some of the Abbreviations and Definitions
- (b) Measurement Configurations
- (c) Mathematical Models of Timing Signals
- (d) Definitions and Properties of Frequency and Time Stability Quantities

These parts are dispensable because they are not directly related to inter-network interface specification in Japan.

3. The history of revised versions
