

JT-Q2941.2 Broadband Integrated Services Digital Network (B-ISDN) Digital Subscriber Signalling System No. 2 (DSS 2) GENERIC IDENTIFIER TRANSPORT EXTENSIONS

1. Relation with the international standards

This standard has been produced based on the ITU-T Recommendation Q.2941.2 decided at the ITU-T SG11 meeting (December 1999, Geneva).

2. Difference from ITU-T Recommendations / international standards

2.1 Selected options

None.

2.2 Selected national options

None.

2.3 Others

(1) The definitions of national standard

This standard contains following two additions against the ITU-T recommendation as national standard.

- Additional Code point to “Identifier related standard/application” in subclause 8.2.
- Additional Code point to “Identifier type“ in subclause 8.2.

(2) Additional descriptions for the TTC’s peculiar note.

The TTC’s peculiar note was described in subclause 5.4 and subclause 8.4 as supplements to this standard.

2.4 Structure comparison with original ITU-T recommendation

The structure of this standard is identical with that of the ITU-T recommendation.
